Christian E. Contreras

Ruby on Rails Backend Developer

Based in Mexico | Open to Remote | er.contreras@hotmail.com | GitHub | LinkedIn

SUMMARY

Ruby on Rails developer with experience working on SaaS and e-commerce applications. I've built REST APIs, integrated Stripe payments and authentication systems, and worked with PostgreSQL to improve database queries and fix performance issues. I also have experience writing RSpec tests, reviewing code, and deploying applications with Docker. Recently, I've been working on modernizing a legacy Rails application, upgrading its dependencies and setting up its production environment.

SKILLS

Backend: Ruby on Rails, PostgreSQL, REST APIs, Devise, JWT, CanCanCan, Panko.
Frontend: JavaScript (ES6+), React, Hotwire (Turbo/Stimulus), HTML5, CSS3/SCSS.
Testing & Quality: RSpec, FactoryBot, RuboCop, CI/CD (GitHub Actions).
Infra & Integrations: Docker, AWS S3, Stripe API, Google OAuth (OIDC).

PROFESSIONAL EXPERIENCE

Software Engineer **Oct 2023 – Mar 2024**
Civica Digital (SaaS Startup) *Remote, Mexico*

- Built core features of a Rails API (CRUD, authentication, JSON serialization, PDF generation), including PostgreSQL schema design and query optimization to resolve N+1 issues, for a government department in Monterrey, Nuevo León.
- Set up an initial Docker configuration to containerize the API for local development.
- Built REST API endpoints to automate the PDF document lifecycle, replacing a manual process for government clients; documented the API in Swagger.
- Implemented SSO with Google OAuth, OIDC, and JWT-based authentication, replacing manual login handling for department staff.
- Led RSpec test coverage for new features, establishing testing conventions used across the codebase.

Ruby Developer **May 2022 – Jun 2023**
Apex Systems (E-Commerce Platform) *Remote, Mexico*

- As part of the payment integration team, contributed to the e-commerce checkout page (debit/credit payments via Stripe for Visa and Mastercard) and picked up cross-team backlog tickets to keep sprint priorities on track.
- Expanded RSpec coverage across payment endpoints, contributing to more stable deployments and fewer checkout bugs.
- Implemented Stripe Level 2/3 enhanced transaction data by working through Stripe's integration documentation; modified the existing React/TypeScript checkout flow to add Stripe Link validations.

Technical Mentor & Code Reviewer **Sep 2021 – May 2022**
Microverse *Remote*

- Paid per approved review to evaluate pull requests from students in Rails, JavaScript, and React, enforcing clean code standards and best practices.

INDEPENDENT WORK

E-Commerce Platform — Legacy Modernization **Feb 2026 – Present**
Self-directed *Source:* GitHub | *Demo:* Live

- Originally built in 2022; resumed active development to modernize the codebase: upgraded Ruby (3.1.3 to 3.3.12) and Rails, containerized with Docker and Docker Compose. Continuing toward Rails 8 / Ruby 4.
- Independently provisioned and deployed to a managed production environment: configured Rails credentials and environment variables, and connected a managed PostgreSQL database service to the web service.
- MVC platform with a normalized schema for authors, publishers, and books, and Minitest coverage across cart and checkout logic.

EDUCATION

B.S. Electrical & Electronic Engineering, *UAEM* **Jan 2017 – Jan 2020**

Full-Stack Web Development Program, *Microverse* **May 2021 – Jan 2022**

LANGUAGES & AVAILABILITY

English (C1, EF SET 66/100), Spanish (Native)
